

Field Testing Department Test Engineering Center Environmental Policy (revised in April 2016)

1. Basic Philosophy

Komatsu Test Engineering Center will actively promote environmental conservation which considers the local community, and engage in business activities from global environmental perspectives by converging the technologies accumulated in testing construction equipment. In this manner, we will contribute to building a sustainable society.

2. Environmental Policy

- 1) We will engage in our business activities in **harmony and cooperation with the local residents**.
- 2) In compliance with the Komatsu Earth Environment Charter, we will make further efforts to **save energy and resources** in our business activities.
- 3) **Everyone who works at the Test Engineering Center** will recognize the environmental impact of our business activities and conduct education and training related to environmental conservation.
- 4) We will define our **objectives and goals** and make continuous efforts for improvement.
- 5) As our business is closely related to the natural environment which surrounds our test field, we will make environmental conservation efforts by engaging in biodiversity activities.
